KEYMACRO is an application that brings back the enjoyment of the classic sound generation in your PC. It allows you to program your own sound sequences by triggering any digital instrument and at a very fast rate. This application can be also used as an external keyer for instruments like the Korg Prophecy or the Emax S10 and for most synthesizers. Keymacro works with any kind of MIDI instrument and it is very easy to use. Extra Info This application is not compatible with 64 bit versions of Windows as it doesn't

Projection of a line onto a plane For
the projection of a line from a point to
another, I am given the following
equation: $\textbf{r} =$
 $x_1 \hat{\textbf{i}} +$
 $x_2 \hat{\textbf{j}} +$
 $x_3 \hat{\textbf{k}}$ I am trying to
figure out the equation of the line that
is projected onto a plane $A: x_1 - x_2$
 $- x_3 = 0$ and the plane has normal
vector $(1, 1, 1)$. I am confused
because this is an equation I found
online, but I am getting the same
answer as: $x_1 + x_2 - x_3 = 0$ In

short, I am getting the same answer as the equation I found online, but I am not understanding why that is the case. I would greatly appreciate your help. Thank you. A: If you put the plane equation in this form:

$$\vec{r} = \vec{a} + t\vec{n}$$
 Then you can express t by using the dot product:
$$t = \frac{\vec{n} \cdot \vec{r}}{\vec{n} \cdot \vec{n}}$$

Since the plane's normal vector is $(1, 1, 1)$, this simplifies to

$$t = \frac{\vec{n} \cdot \vec{r}}{n^2}$$
 This is only valid if $\vec{n} \cdot \vec{n}$ is positive. It

is always true that $n^2 \geq 0$, which is what we want here. So, in your case, the equation of the line is $\vec{\{$

Audiostation - a program that plays digital music! What else you should know This is a simple application with a few features. One is that it can be run as a background process, and once it starts playing, it will always stay in the foreground, so you'll always have the possibility to control it. It is also available in a portable version, so you can use the app on USB sticks, pen drives, etc. You can use it to play music by recording files in SID or

MIDI format, by playing a CD, or any other format. You'll be able to set the volume, balance, panorama, and a number of other parameters.

Furthermore, you can store the playlists for further use. If you want more control, you can also use the Editor application to control the playback. To close the app, simply select Exit from the Main menu, or choose Exit from the Editor. To play a song, use the Piano Roll menu (see screenshot below), or record your music by pressing the Record button. You'll be able to add notes and change

the volume. More details A microphone (or at least audio input) is required to be able to record files. A standard SID-based music file must be in the SID format. The application can play MUS files and SID files. You can choose the device to play and record from, but it will always be the default device. Not all devices will play all files, so you might want to check that beforehand. The sound that is played through the speakers or headphones is stored in the RAM. You can clear the stored information with Clear button. Volume and balance controls are

available in the panel. You can also select the panorama that will be used. Pressing the PageUp key will switch to the previous playlist. There are 24 preset playlists. There is a button to switch from text to audio mode. The last option is to go to the Editor mode. This mode will let you control playback in more detail. You can set a number of parameters, like: Volume Panorama Looping Solo Sync Pan Vibrato Voicing Details of each of the settings can be found in the Editor Settings Panel. The Editor is easy to use, with a "Piano Roll" display and buttons. You

can change settings with
