Similar to Autodesk's other programs, AutoCAD Free Download is distributed with a single-user license and a multi-user license. A single-user license costs \$5,000. A multi-user license costs \$10,000. AutoCAD is not free. An AutoCAD software system license costs more than \$10,000 and is not free. By contrast, you can use Sketchup for free. AutoCAD requires both 32-bit and 64-bit editions. You need to purchase an AutoCAD version that supports the hardware you want to use. The software's AutoCAD 2012 version can only run on 32-bit Windows systems. For more information, see AutoCAD is not free. An AutoCAD software system license costs more than \$10,000 and is not free. AutoCAD is a fully-featured yet easy-to-learn CAD software application for creating 2D drafting and technical drawing (CAD) models. AutoCAD is not a drawing package. Rather, AutoCAD is a design package. It is designed to help you create technical drawings, using the standard drawing tools from the Graphics, Text & Illustration toolbars. You also use the command line or AutoCAD's Graphical User Interface (GUI) to create drawings. This page shows how to create a 2D sketch in the horizontal or vertical axis. DraftSight – A suite of tools that enhances the editing,

viewing, and output of AutoCAD, including the ability to modify CADDRAW files. It also integrates with a number of third party CAD software, including Mastercam, Solidworks, 3D Builder, etc. Design Technology – Similar to the professional version of Autodesk Inventor, it is designed for 2D architectural, mechanical and construction design. DynaCAD – A web-based user interface that connects to AutoCAD using AJAX and JavaScript. LayOut – A web-based user interface that connects to AutoCAD using AJAX and JavaScript. Architectural Desktop – A web-based user interface that connects to AutoCAD using AJAX and JavaScript. Autodesk Suite on Autodesk 360 – A cloud-based suite of applications for AutoCAD, AutoCAD LT, Inventor, Revit, and AutoCAD Architecture which is being offered by Autodesk as a subscription based service. The following quote of John Warnock about the license in AutoCAD in the 1980s appears in Autodesk's "Autodesk: The Road Ahead": "There was never any question in my mind that one day Autodesk software would be owned by everyone. However, we never intended that such a revolutionary product would be

distributed as a single, proprietary product. The vision and philosophy behind AutoCAD is the most important single factor that accounts for its success. We believed that the product would one day be owned and managed by a consortium of companies. These companies could offer the products and services to end users that were complementary to what Autodesk was already doing. There were a number of products that were later developed and were owned by Autodesk, such as AutoCAD, AutoCAD LT and Alias. We were very pleased with this arrangement, but it is still not ownership by Autodesk. We continue to hold the rights to the software, and if we feel that it is in the best interests of the company, we may decide to offer a competing product at some future time." Autodesk Advanced Technology Evangelism (ATEvangelism) – A channel that offers frequent updates on new technology within AutoCAD.
