As part of the project, I need to be able to test all of the possible values that can be configured, which includes changing the actual system.config value. However, the project is part of a larger solution, and by default, the app.config is stored in the solution directory. I've already tried copying the app.config from my project's directory to the solution directory, but that has no effect. The only way I can think of doing this is by overriding the app.config object within my tests, but I can't think of a way to be able to do that. I need to do this as part of a unit test and can't use a separate configuration file. A: The Class AppSettingsReader was added to reflect the changes made to the application settings. Please check this out: "The application settings reader is used to read the settings from the application configuration file, including the settings from a

King Khichdi King Khichdi, Royal Khichdi, The Khichdi King is the main antagonist of Khichdi: The Movie, who accidentally creates a giant, sexually-repressed elephant. He is the king of the Rajputs who is magically transported to a village in the 18th century by an angry god, who gets angry when he is defeated by Devi. King Khichdi rules the village with an iron fist and an iron will. His solution for everything in the village is to use an iron club as the measure of most of the villagers' crores. He sometimes uses what is known as The Iron Sadhana to achieve his goals. His vast lands include vast lands of land-locked Punjab, so he is able to travel fast. After his magic quits, he can travel through the air. After defeating Devi, he has gained ten iron
