versionQ: Elasticsearch bulk query with additional conditions on one field I am using the elastic search bulk api with node.js to update my documents. There is a field called username in my index. I want to update some documents by bulk put `indx_name` But I want to add two conditions. If there are some other documents with a specific username, then I want to update those documents as well. If the username is not in the index, then

---

I want to create it. For example, if my index has 5 documents with the username as 'xyz' and I want to add 2 more documents with the username as 'xyz', then I want the total number of documents in the index to be 5 (as it will have two documents with the same username). If I create 2 documents with the username as 'xyz' then the username field will be present in the index. I am not able to figure out how can I go about achieving this. A: Yes, it is

---

possible. Refer this bulk request.

```
POST _bulk { "index": {
  "_index": "index1", "_type":
  "type1", }, "type": { "_index":
  "index1", "_type": "type1", },
  "body": { "script": { "source": "if
  (ctx._source.username!= null)
  { ctx._source.username =
  ctx._source.username.split('
  ').join(""); ctx._source.username =
  ctx._source.username.split('
  ').join(""); } ", "params": { "input":
  [ {"_source": { 1cb139a0ed
```
